

# PumpaCOW

## Oral Fluids System for Adult Cattle

### What is it?

**ORAL FLUIDS FOR NEW CALVED, SICK or DEHYDRATED COWS.**

It contains in balanced appropriate amounts - **Calcium, Energy, Magnesium, Vitamin B12** and **electrolytes**.

Calcium Propionate is the major ingredient due to its high Calcium content and also its high energy level that contributes directly to the Krebs cycle.

Dextrose also provides energy and an insulin increase that helps in energy deficiency

Magnesium, Potassium, Sodium & Chloride assist in re-hydration and acid-base balance.

### How to Use:

Mix one jug of PumpaCOW powder with 20L of warm water at 38°C and use one of our pump and gag systems to feed the fluids to your cow. See over page for the equipment.

### Pack Size:

PumpaCOW comes in a 25 feed pack.

We provide a jug to measure, rather than sachets. This saves waste and you can re-use the jug and a 30 litre bucket for other purposes.

### Price:

£5 per feed, £125 per 20kg bucket.
